## Enterprise UX

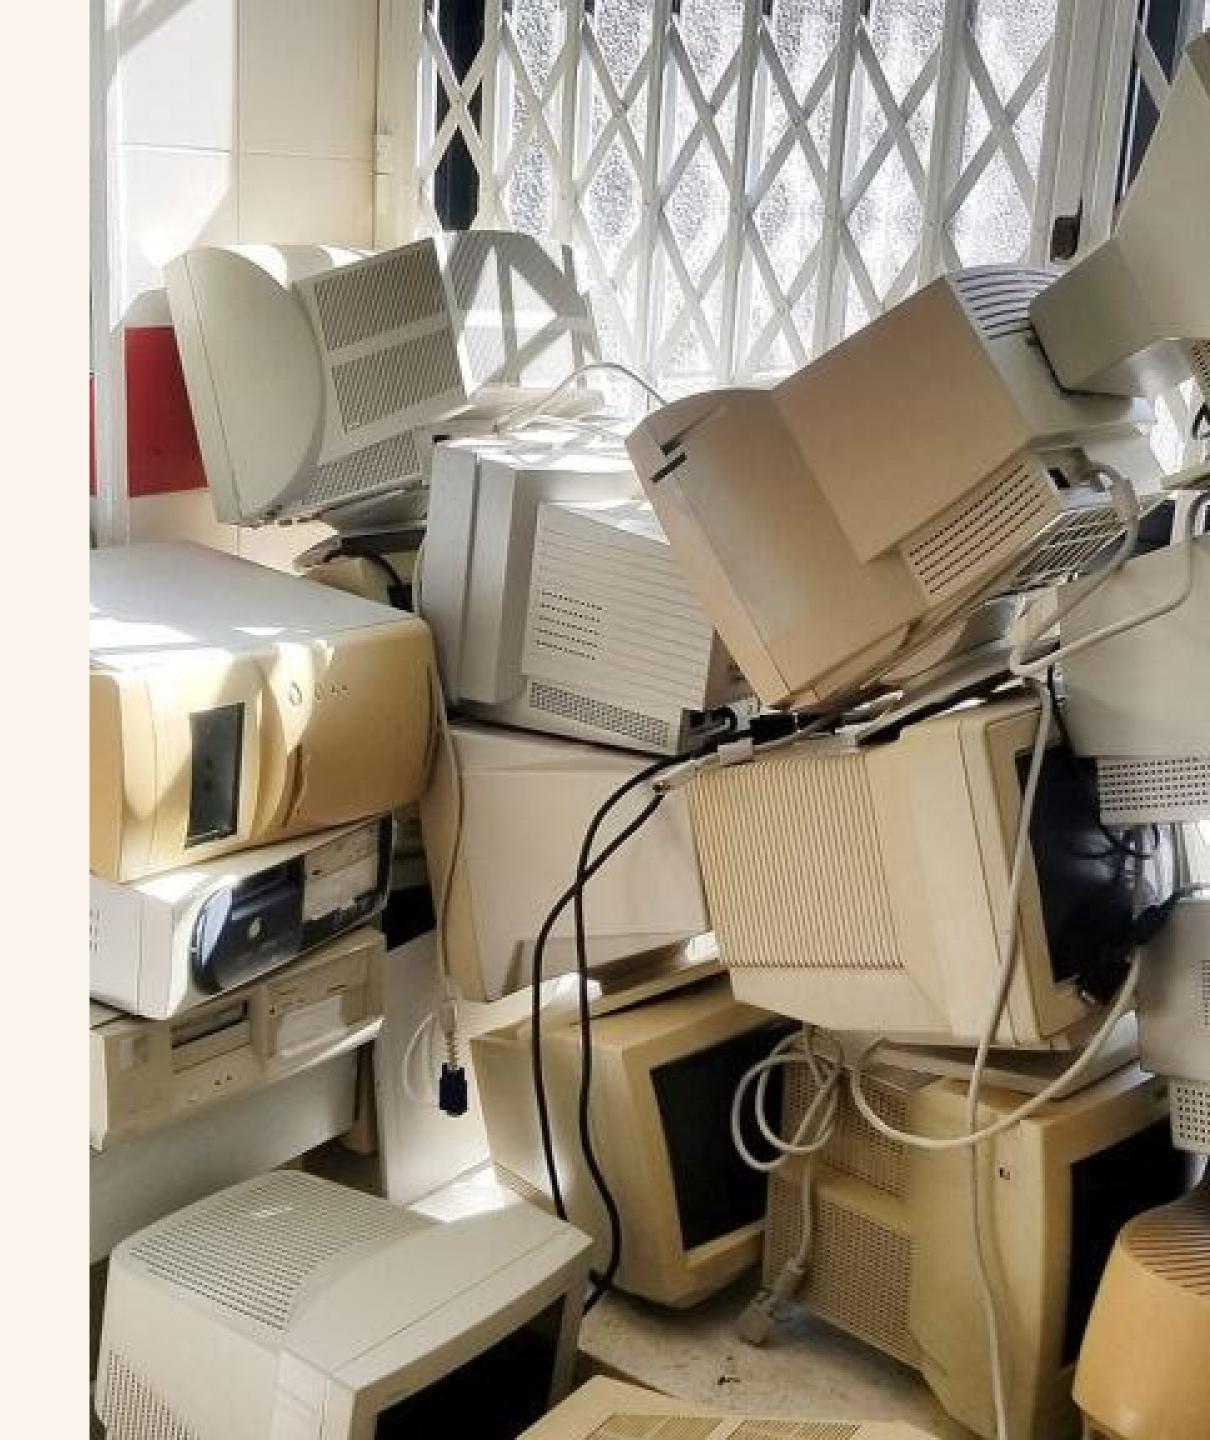

By David van Duinen - Hike One

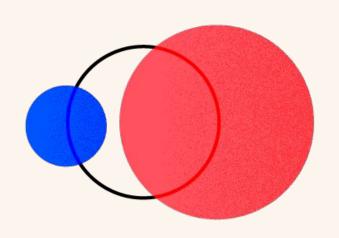

## Legacy software, what comes to mind?

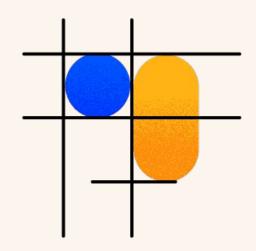

## Legacy software

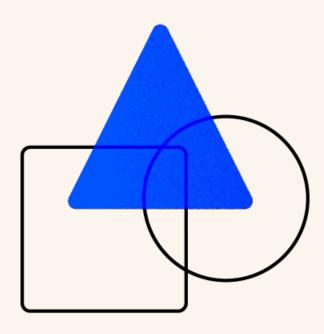

- Custom built (often)
- Bad User Experience
- Expensive to replace
- Technically outdated
- Long-term employees don't mind
- New hires frequently find it frustrating

## When replacing legacy software:

1.
Understand the business case before focussing on the user.

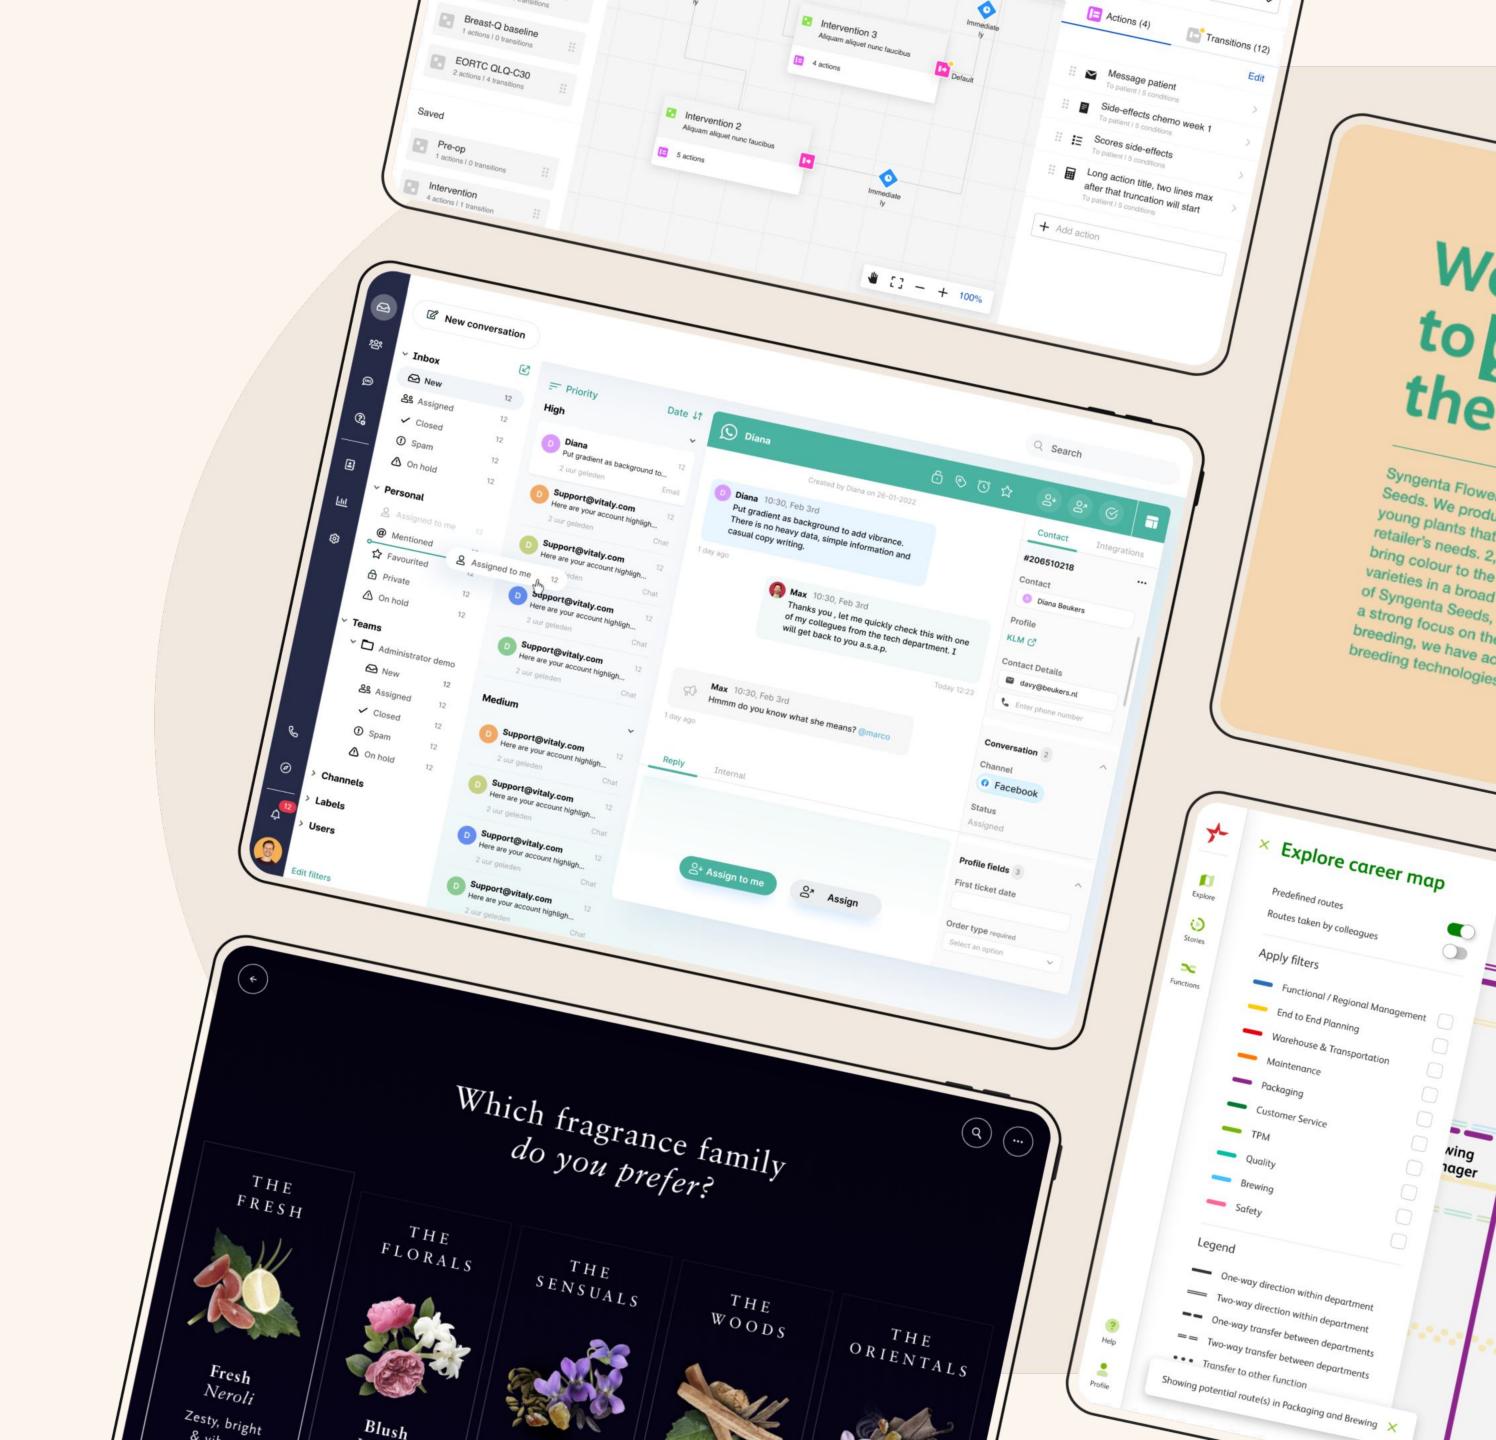

2.
Speak the same language.

3.
Keep your
'troublemakers' close.

## Business challenge with an IT-solution

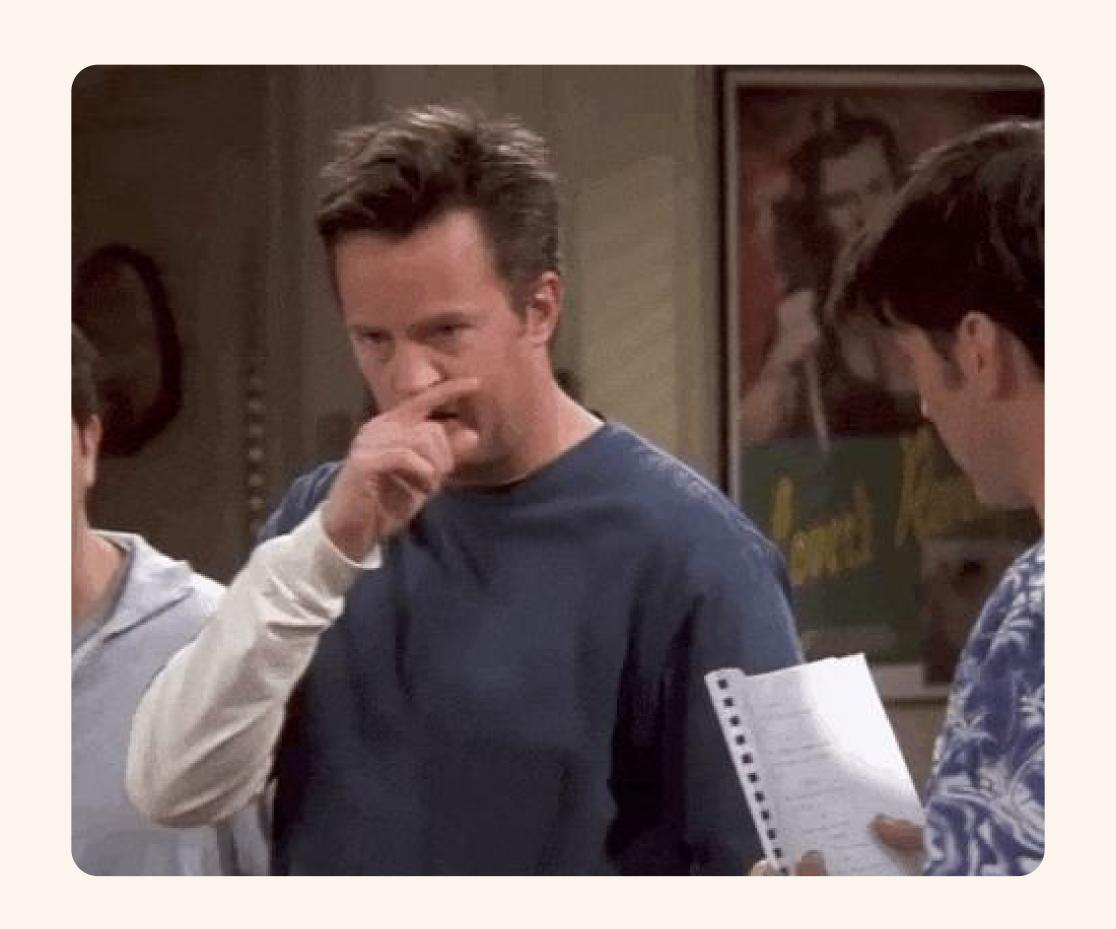

Expectation Reality

Reality

# Business & tech don't care about the user

## The user doesn't see the problems

Improving UX is often not a main driver, unless it addresses a business challenge.

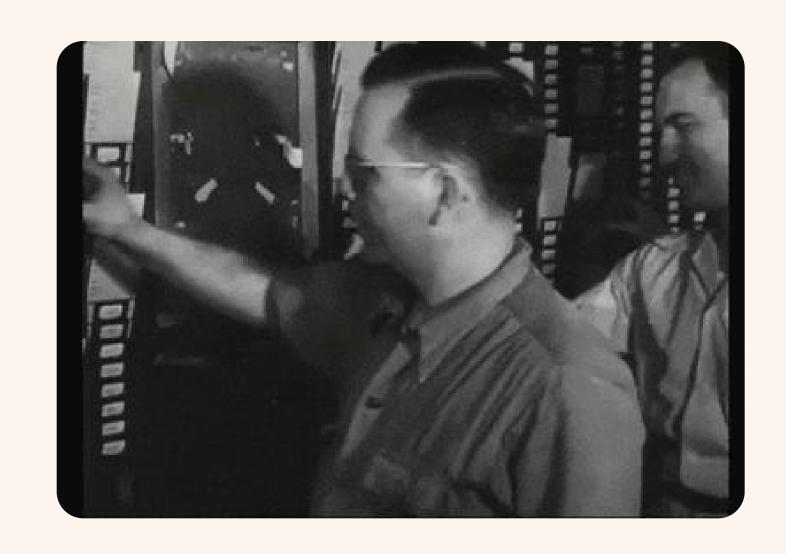

### Reasons to replace

- 1. Technology is EOL
- 2. Business critical processes are at risk
- 3. Missed business opportunities (e.g. efficiency, saving cost etc.)

### So what is the role of UX?

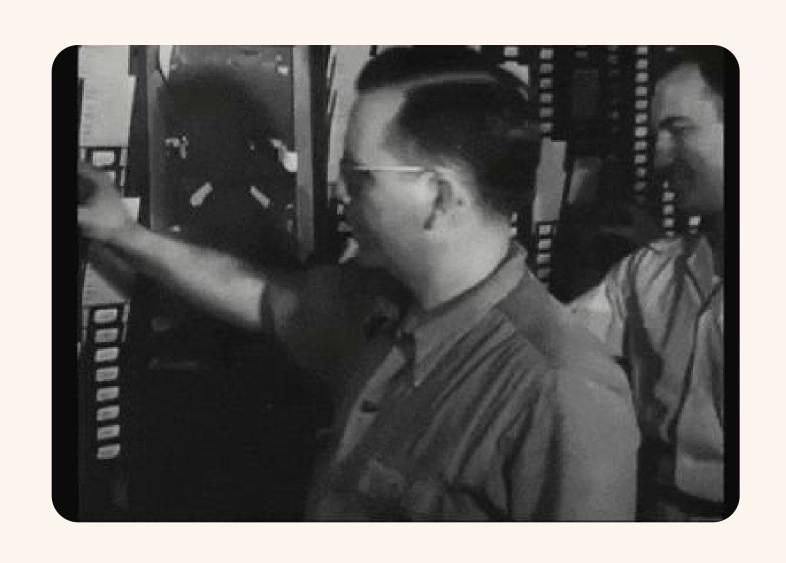

### Executing

Or

#### Executing

## Use your skills to optimise the outcome

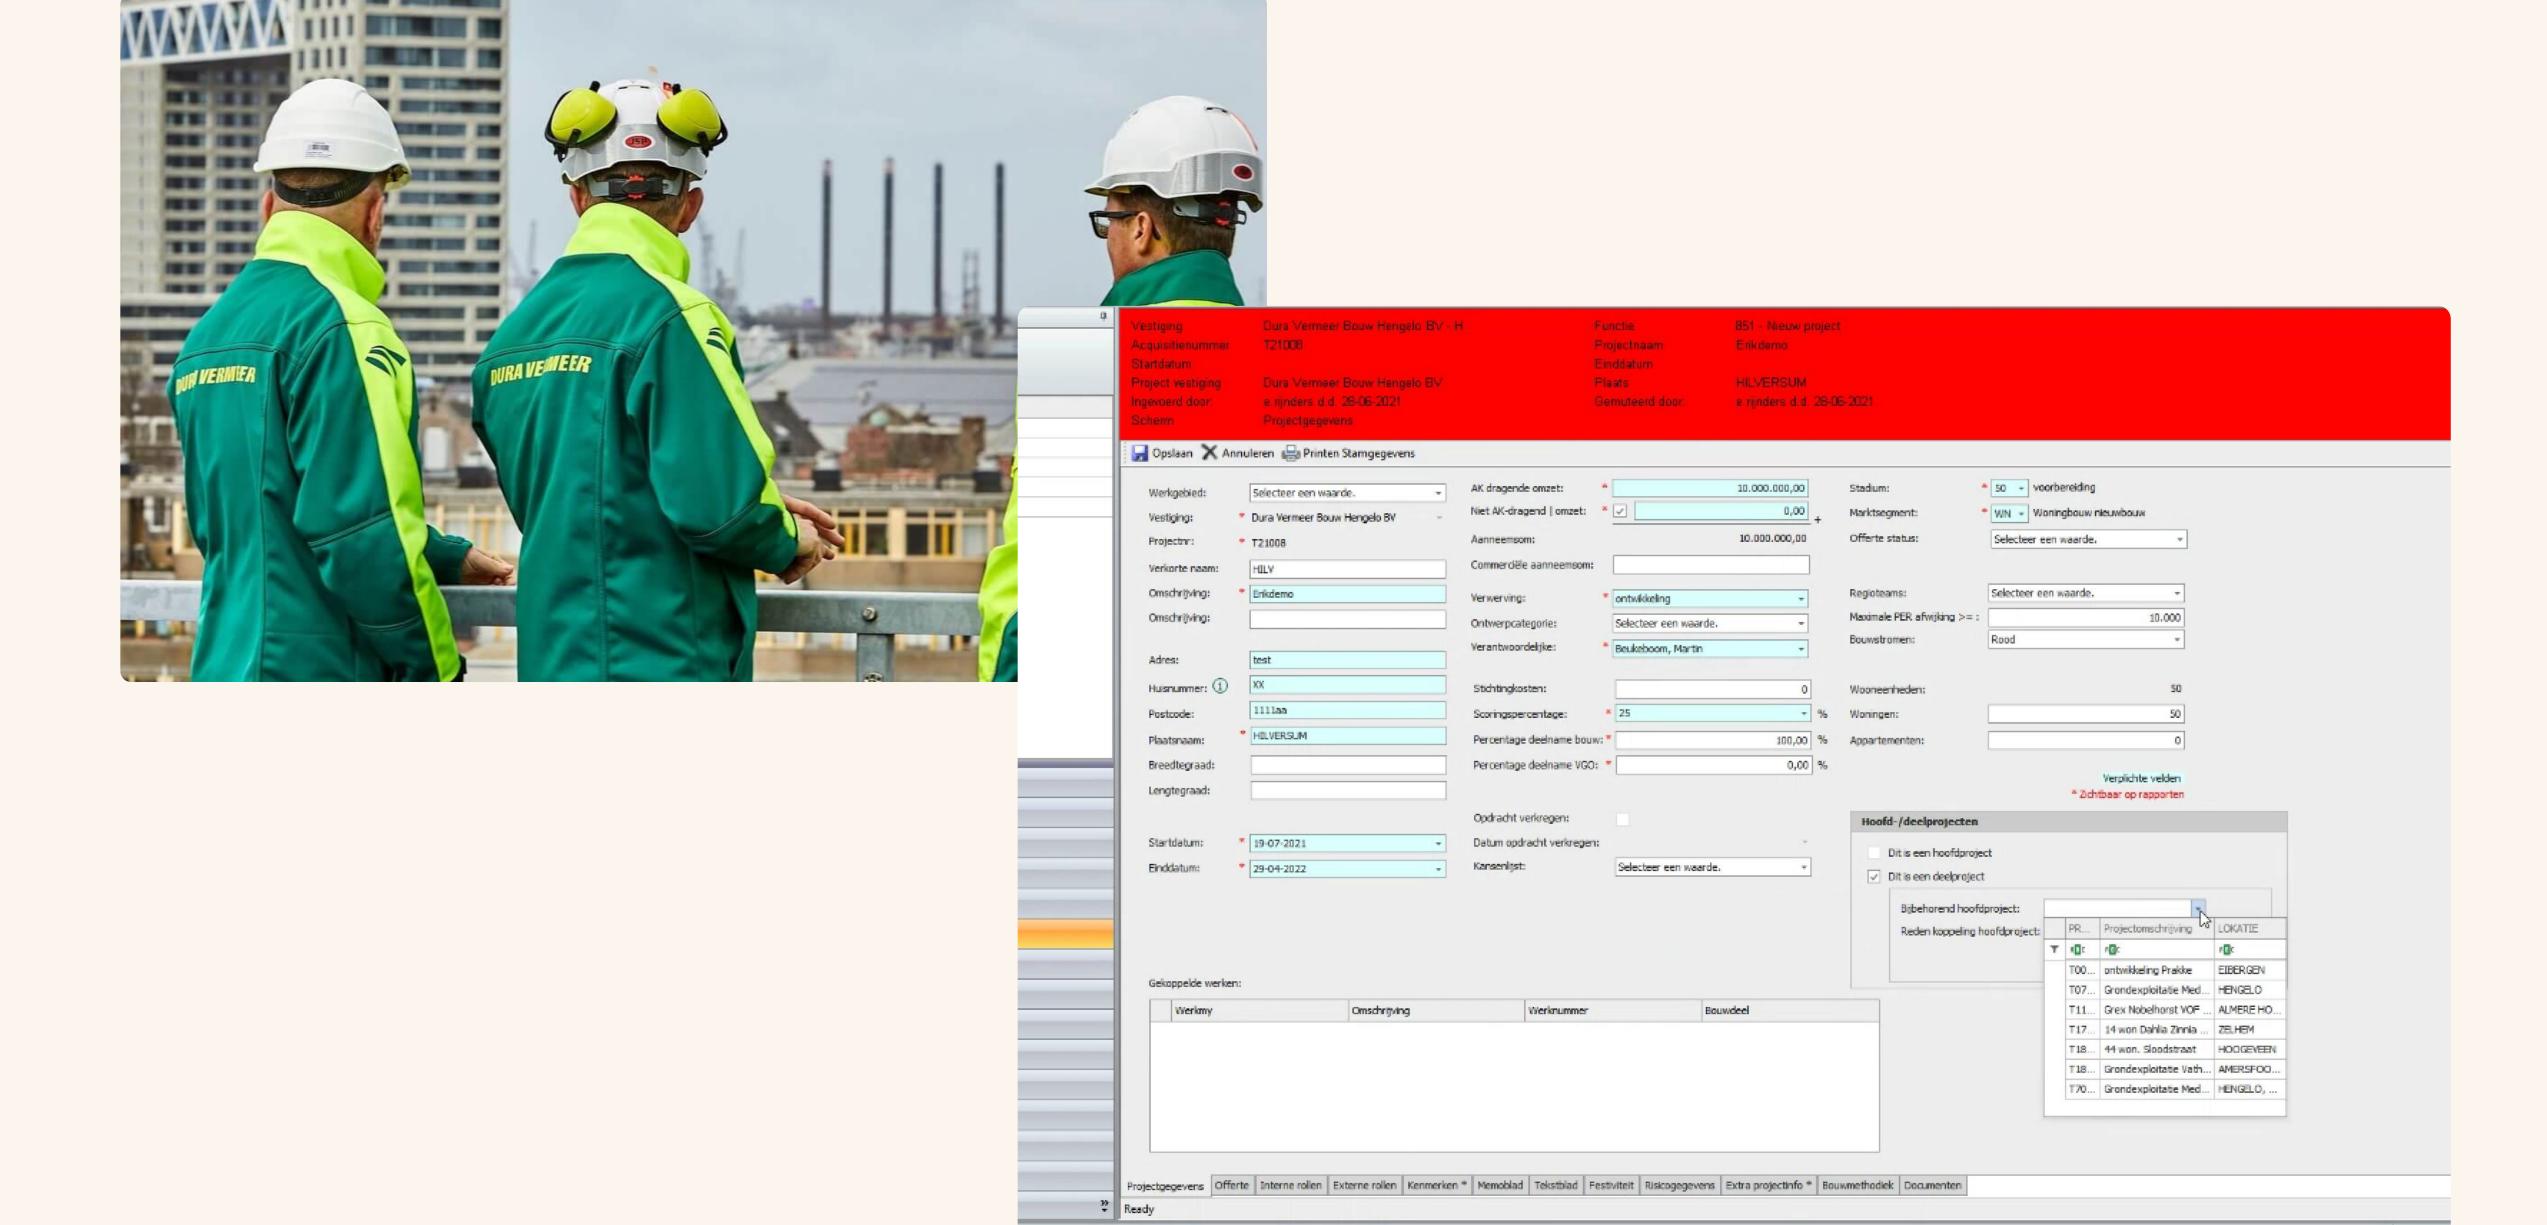

Or

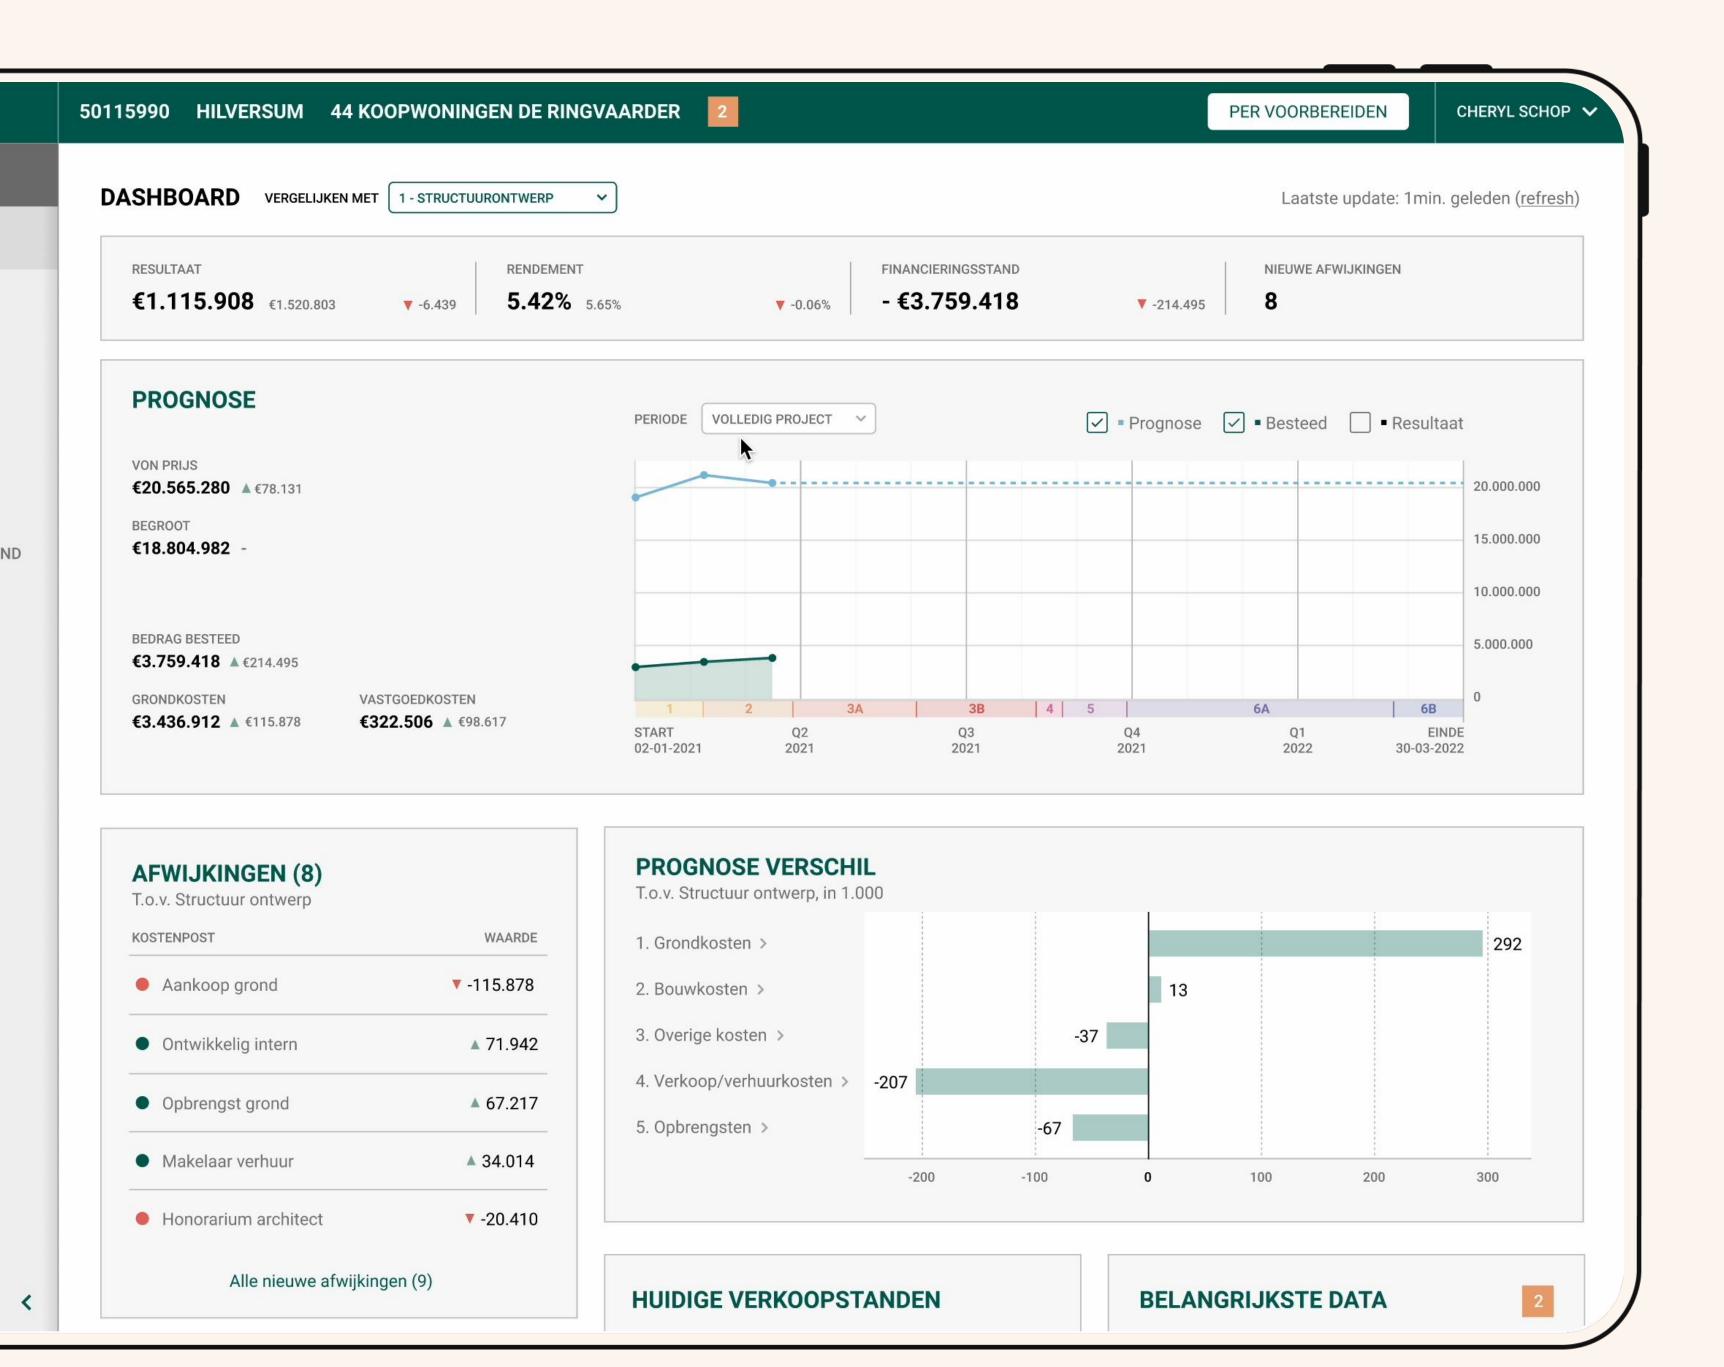

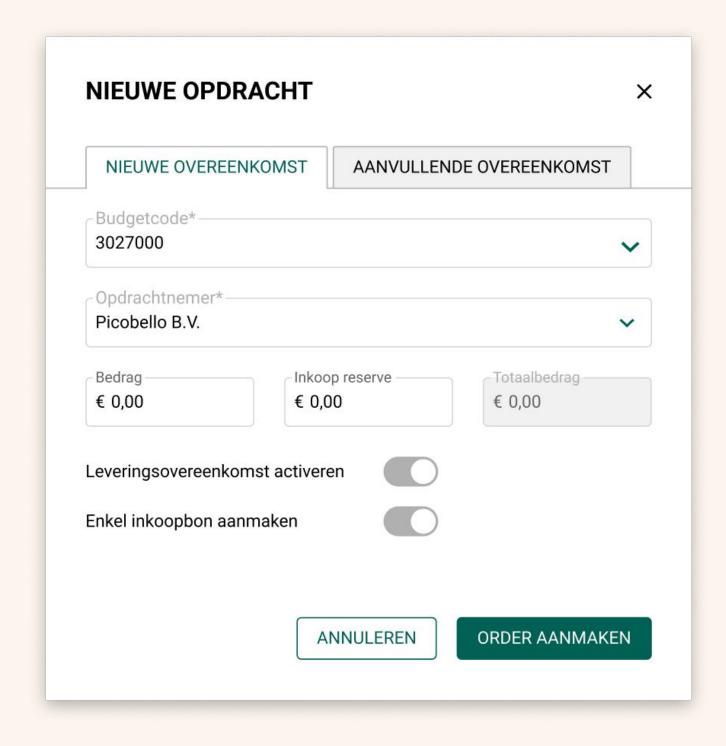

## 3 tips from experience

1. Understand the business case before focussing on the user

**Hike One** 

## 2. Speak the same language

### How to open the conversation:

- 1. Opportunity Solution Tree workshops
- 2. Ask about KPI's of internal stakeholders
- 3. Build trust with development

## 3. Keep your 'troublemakers' close

Shadowing & prototyping to show the benefits of potential new solutions

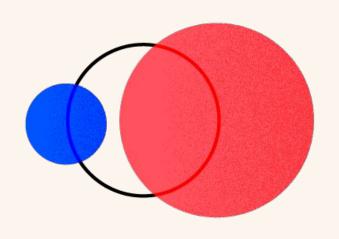

## Invite them to sprint demo's

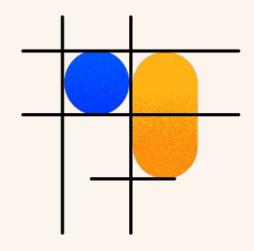

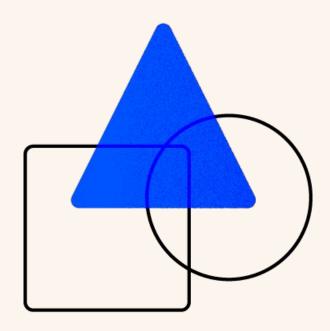

### Replacing legacy software

## Business challenge with an IT-solution

### When replacing legacy software:

I.
Understand the business case before focussing on the user.

2.
Speak the same language.

3.
Keep your
'troublemakers' close.
